Project: Endless Runner

Tool: ChatGPT

Prompt 1 — Fix collision detection

Inspect the existing game engine and fix the collision bug where fast-moving obstacles can pass through the player. Add a reasonable maximum speed, preserve existing gameplay, and explain the changes.

Prompt 2 — Add a Game Over screen

Modify the existing game to display a Game Over screen with the final score when the player collides with an obstacle, instead of displaying the result only in the console. Preserve the collision fix.

Prompt 3 — Add replay and difficulty selection

Add Easy, Medium, and Hard difficulty options after Game Over. Allow the player to restart with the selected difficulty or exit. Reset the score, obstacles, and speed appropriately while preserving previous features.

Prompt 4 — Add sound effects

Add sound effects for jumping, scoring when passing an obstacle, and Game Over. Load the sounds from the project's assets folder and preserve the existing gameplay features.
